React Calculator

Ideal time of completion: 3 - 4 hrs

Problem statement

Create a simple calculator app.

Instructions

- Create a simple calculator app according to the gif below (on the next page) and that should have the following features.
  - Add
  - Multiply
  - Subtract
  - Divide
  - Clear
  - Equals
  - Add/multiply,subtract/divide can be clubbed together (just like a normal calculator on your phone).
- You are **ALLOWED** to style the switch the way you like. Do whatever you want with the styling. **ONLY** the functionality of the component should work.
- You are **ALLOWED** to google and read how to approach the problem
- **DO NOT** copy and paste code from the internet
- **DO NOT** cheat with other students, I am trusting you all for this one!
- Once you have finished with the test, make a video recording your computer screen (via phone or a software like OBS/screencastify etc) and explaining how you have approached the problem **in code and showing the final product**. The video can be **UPTO 3 mins** long. *Please don't record videos longer than that.*
- Upload the code to github.
- Once you have recorded the video ,upload it on youtube (unlisted or whatever), drive or wherever you want to upload it. *Submissions without video will not be evaluated.*
